.NET · C# · Angular · TypeScript · SQL Server · REST APIs · Azure · Docker · Agile · CI/CD

Results-driven Software Engineer with 2+ years of experience architecting and delivering scalable, production-grade backend and full-stack applications using ASP.NET Core, C#, Angular, and RESTful APIs. Demonstrated expertise in clean architecture, SOLID principles, Object-Oriented Programming (OOP), database performance optimization, and secure API design with JWT and Okta. Proven track record of building enterprise-level systems across the full Software Development Life Cycle (SDLC) — from design and development to deployment and production support. Strong collaborator with cross-functional teams, delivering high-quality, maintainable software aligned with business objectives.

EXPERIENCE

Associate Software Engineer (PADA) — Accenture Solutions

April 2024 – March 2026

- Designed and maintained enterprise-grade backend services using ASP.NET Core, C#, and Node.js, delivering scalable RESTful APIs supporting complex business workflows across multi-region applications.
- Engineered Angular 17 front-end modules with reactive forms, custom validations, and two-way data binding, enabling efficient administrative and operational workflows for internal users.
- Integrated Angular front-end with RESTful APIs following secure API design practices, ensuring consistent data flow, error handling, and seamless user experience across distributed systems.
- Optimized REST API endpoints, LINQ queries, and Entity Framework Core database interactions, achieving measurable improvements in application response time and system throughput.
- Implemented Okta-based OIDC authentication and role-based access control (RBAC), securing both backend APIs and Angular front-end applications against unauthorized access.
- Enforced clean architecture and SOLID principles (Repository Pattern, Dependency Injection) across full-stack layers, improving long-term codebase maintainability and scalability.
- Developed configuration-driven feature toggle services for controlled feature rollouts, reducing deployment risk and enabling zero-downtime releases across backend APIs and Angular UI.
- Proactively monitored application health using Splunk dashboards, performing root-cause analysis on logs and metrics to resolve production incidents and minimize downtime.

Java Trainee — Soft Crowd Technologies

January 2022 – March 2022 | Internship

- Developed core backend modules in Java for an enterprise application, implementing business logic and data processing pipelines to support operational workflows.
- Integrated Java backend services with front-end components, improving system usability and end-to-end data consistency.
- Built RESTful API endpoints and authored unit tests to validate application stability, reliability, and regression coverage.

EDUCATION

Bachelor of Engineering — Computer Engineering | MET's Institute of Engineering, Nashik, Maharashtra, India 2019

– 2023 | CGPA: 8.65 / 10

Higher Secondary Certificate (HSC) | Z.B. Patil College, Dhule, Maharashtra, India 2017

– 2019 | 67%

PROJECTS

Smart Task & Workflow Management System

Architected and built a full-stack, multi-user task and workflow management platform enabling teams to create, assign, prioritize, and track tasks with configurable workflow states and real-time status visibility. Implemented JWT-based authentication, role-based access control, and a comprehensive audit log for all task mutations. Designed with clean architecture, Repository Pattern, and SOLID principles for modularity and testability.

Tech Stack: ASP.NET Core Web API · C# · Entity Framework Core · SQL Server · PostgreSQL · RESTful APIs · JWT Authentication · Clean Architecture

Inventory & Warehouse Management System

Designed and delivered a production-ready, full-stack Inventory and Warehouse Management System supporting multi-warehouse operations at scale. Key capabilities include product and SKU catalog management, goods receipt (GRN), stock dispatch, inter-warehouse stock transfers with full audit trails, purchase order lifecycle management, supplier profiles, and a real-time stock dashboard with low-stock alerts and valuation reports. Secured with JWT-based role-based access control (Admin / Warehouse Manager / Staff).

Tech Stack: ASP.NET Core 8 Web API · C# · Angular 17 · TypeScript · Entity Framework Core · SQL Server · Bootstrap 5 · JWT Auth · Clean Architecture · SOLID Principles

AI PR Review Agent — Multi-Agent System with Claude

Built a 3-agent C# system that automatically reviews GitHub Pull Requests using the Claude API. FetcherAgent retrieves PR diffs from GitHub, ReviewerAgent sends the diff to Claude and parses the response into structured JSON (verdict, severity-tagged issues, suggestions), and CommenterAgent posts the structured review back onto the live PR as comments, including suggested fixes for critical issues. Implemented defensive error handling for malformed AI responses and API failures, ensuring the pipeline degrades gracefully instead of crashing. Validated end-to-end against real GitHub PRs, correctly identifying planted bugs with accurate severity classification.

Tech Stack: C# · .NET · Anthropic Claude API · GitHub REST API · Newtonsoft.Json · Agentic Workflow Design

SKILLS

Languages: C#, C++, TypeScript, JavaScript, Python, HTML, CSS, OOPs

Frameworks: ASP.NET Core, ASP.NET MVC, ASP.NET Web API, Angular 17

Architecture: Clean Architecture, CQRS, Mediator, Repository Pattern, SOLID, MVC, Microservices

Databases: SQL Server, PostgreSQL, Entity Framework Core, LINQ

Testing: XUnit, Jest, TDD, Unit Testing, Postman, SoapUI, SonarQube

DevOps: Jenkins, CI/CD, Docker, EKS, Azure (AZ-900), RabbitMQ, GitHub Actions

Security: JWT, Okta, OIDC, RBAC, Secure API Design

Tools: Git, GitHub Copilot, Splunk, Jira, Confluence, VS Code

Methodologies: Agile, Scrum, TDD, Code Review, Production Support

Professional Strengths: Backend Development, Full-Stack Collaboration, API Design, Production Support, Performance Optimization, Secure Application Development

CERTIFICATIONS

- **Microsoft Azure Fundamentals (AZ-900)** — Microsoft (May 2025)
- **GitHub Copilot Certification** — GitHub (May 2025)
- **Reinvention with Agentic AI** — Stanford HAI (December 2025)
